contents

july 1989
volume 56
number 1

1 Effects of cobalt, magnesium, and cadmium on contraction of rat soleus muscle
Angela F. Dulhunty and Peter W. Gage

15 Resolvability of free energy changes for oxygen binding and subunit association by human hemoglobin
Martin Straume and Michael L. Johnson

27 Proton diffusion along the membrane surface of thykaloids is not enhanced over that in bulk water
Andrea Polle and Wolfgang Junge

33 Effect of adenosine triphosphate analogues on skeletal muscle fibers in rigor
Mark Schoenberg

43 Molecular dynamics of tryptophan in ribonuclease-T1. II. Correlations with fluorescence
Paul Axelsen and Franklyn G. Prendergast

67 Effects of normalization errors on size distributions obtained from dynamic light scattering data
Horst Ruf

79 Padé-Laplace method for analysis of fluorescence intensity decay
Željko Bajzer, Andrew C. Myers, Salah S. Sedarous, and Franklyn G. Prendergast

95 Antenna structure and excitation dynamics in photosystem I. II. Studies with mutants of *Chlamydomonas reinhardtii* lacking photosystem II
T. G. Owens, S. P. Webb, L. Mets, R. S. Alberte, and G. R. Fleming

107 Mg^{2+}-paracrystal formation of tropomyosin as a condensation phenomenon. Effects of pH, salt, temperature, and troponin binding
Yoshiharu Ishii and Sherwin S. Lehrer

115 Incorporation of ionic channels from yeast plasma membranes into black lipid membranes
F. Gómez-Lagunas, A. Peña, A. Liévano, and A. Darszon

121 Analysis of the effect of medium and membrane conductance on the amplitude and kinetics of membrane potentials induced by externally applied electric fields
Zenobia Lojewska, Daniel L. Farkas, Benjamin Ehrenberg, and Leslie M. Loew

129 Membrane structure in isolated and intact myelins
H. Inouye, J. Karthigasan, and D. A. Kirschner

139 Cortical shell-liquid core model for passive flow of liquid-like spherical cells into micropipets
A. Yeung and E. Evans

151 Apparent viscosity and cortical tension of blood granulocytes determined by micropipet aspiration
E. Evans and A. Yeung

161 Intermediates in membrane fusion and bilayer/nonbilayer phase transitions imaged by time-resolved cryo-transmission electron microscopy
D. P. Siegel, J. L. Burns, M. H. Chestnut, and Y. Talmon

171 Energetics of ion permeation through membrane channels. Solvation of Na^+ by gramicidin A
Johan Åqvist and Arieh Warshel

183 Thermotropic phase behavior of phosphatidylcholines with ω-tertiary-butyl fatty acyl chains
Ruthven N. A. H. Lewis, Henry H. Mantsch, and Ronald N. McElhaney

195 Birefringence of macromolecules. Wiener's theory revisited, with applications to DNA and tobacco mosaic virus
Rudolf Oldenbourg and Teresa Ruiz

brief communications

207 Delayed activation of large-conductance Ca^{2+}-activated K channels in hippocampal neurons of the rat
Yoshimi Ikemoto, Kyoichi Ono, Atsuya Yoshida, and Norio Akaike

213 Optical recording of the electrical activity of synaptically interacting *Aplysia* neurons in culture using potentiometric probes
T. D. Parsons, D. Kleinfeld, F. Raccuia-Behling, and B. M. Salzberg

223 Correction

225 Correction

august 1989
volume 56
number 2

229 ATP-sensitive potassium channel and bursting in the pancreatic beta cell. A theoretical study
Joel Keizer and Gerhard Magnus

243 Polymorphic phase behavior of lysophosphatidylethanolamine dispersions. A thermodynamic and spectroscopic characterization
James L. Slater, Ching-hsien Huang, Ralph G. Adams, and Ira W. Levin

253 Water and polypeptide conformations in the gramicidin channel. A molecular dynamics study
See-Wing Chiu, Shankar Subramaniam, Eric Jakobsson, and J. Andrew McCammon

263 Biochemical kinetics of skeletal actoSubfragment-1 at high subfragment-1 concentrations
Leonard A. Stein and Vijay A. Harwalkar

273 Evidence for chaotic behavior in driven ventricles
Guillermo V. Savino, Lilia Romanelli, Diego L. González, Oreste Piro, and Max E. Valentinuzzi

281 Angle of the retinal of bacteriorhodopsin in blue membrane
R. Tóth-Boconádi, S. G. Taneva, and L. Keszthelyi

285 Electrophoresis and orientation of F-actin in agarose gels
Julian Borejdo and Henry Ortega

295 Quasi-continuum models of twistlike and accordionlike low-frequency motions in DNA
Kuo-Chen Chou, Gerald M. Maggiora, and Boryeu Mao

307 Determination of the structure of a membrane-incorporated ion channel. Solid-state nuclear magnetic resonance studies of gramicidin A
Ross Smith, Denise E. Thomas, Frances Separovic, Annette R. Atkins, and Bruce A. Cornell

315 Mutual diffusion of interacting membrane proteins
James R. Abney, Bethe A. Scalettar, and John C. Owicki

329 Location of the heme-Fe atoms within the profile structure of a monolayer of cytochrome *c* bound to the surface of an ultrathin lipid multilayer film
James M. Pachence, Robert F. Fischetti, and J. Kent Blasie

339 Electrostatic and steric control of electron self-exchange in cytochromes *c*, c_{551}, and b_5
Dabney White Dixon, Xiaole Hong, and Scott E. Woehler

353 Evidence for ligand-induced conformational changes in proteins from phosphorescence spectroscopy
Zhi Li and William C. Galley

361 Distance dependence of the tryptophan-disulfide interaction at the triplet level from pulsed phosphorescence studies on a model system
Zhi Li, William E. Lee, and William C. Galley

369 Surface pH controls purple-to-blue transition of bacteriorhodopsin. A theoretical model of purple membrane surface
Istvan Szundi and Walther Stoeckenius

385 Proton flux in large unilamellar vesicles in response to membrane potentials and pH gradients
Tom E. Redelmeier, Lawrence D. Mayer, Kim F. Wong, Marcel B. Bally, and Pieter R. Cullis

395 Evidence that the two free sulfhydryl groups of plasma fibronectin are in different local environments. Saturation-recovery electron spin resonance study
Ching-San Lai, C. Narasimhan, and Jun-Jie Yin

401 Form birefringence of muscle
Richard C. Haskell, Francis D. Carlson, and Paul S. Blank

brief communications

415 Determination of the fractal dimension of membrane protein aggregates using fluorescence energy transfer
T. G. Dewey and M. M. Datta

421 QX-314 restores gating charge immobilization abolished by chloramine-T treatment in squid giant axons
Joëlle Tanguy and Jay Z. Yeh

429 Changes in force and stiffness during stretch of skeletal muscle fibers, effects of hypertonicity
A. Månsson

september 1989
volume 56
number 3

437 Simultaneous bidirectional magnesium ion flux measurements in single barnacle muscle cells by mass spectrometry
Joseph G. Montes, Raymond A. Sjodin, Alfred L. Yergey, and Nancy E. Vieira

447 ^{31}P-Nuclear magnetic resonance spectroscopy of the toad retina
D. V. Apte, Y. Koutalos, D. K. McFarlane, M. J. Dawson, and T. G. Ebrey

453 Absolute absorption spectra of batho- and photorhodopsins at room temperature: picosecond laser photolysis of rhodopsin in polyacrylamide gel
Hideki Kandori, Yoshinori Shichida, and Tôru Yoshizawa

459 Charge motion in MbCO crystals after flash photolysis
Icko E. T. Iben, Lajos Keszthelyi, Dagmar Ringe, and György Váró

465 In vivo creep and stress relaxation experiments to determine the wall extensibility and yield threshold for the sporangiophores of phycomyces
Joseph K. E. Ortega, Edwin G. Zehr, and Russell G. Keanini

477 Spatial order as a source of kinetic cooperativity in organized bound enzyme systems
Jaques Ricard, Nicolas Kellershohn, and Guillermo Mulliert

489 Integer-spin electron paramagnetic resonance of iron proteins
Michael P. Hendrich and Peter G. Debrunner

507 Real-time imaging of single DNA molecules using fluorescence microscopy
Timothy W. Houseal, Carlos Bustamante, Robert F. Stump, and Marcos F. Maestre

517 Microsecond rotational motion of spin-labeled myosin heads during isometric muscle contraction: saturation transfer electron paramagnetic resonance
Vincent A. Barnett and David D. Thomas

525 Reconstruction of the probe angular distribution from a series of electron spin resonance spectra of tilted oriented samples
Thomas P. Burghardt and Anthony R. French

535 Myosin cross-bridge orientation in rigor and in the presence of nucleotide studied by electron spin resonance
Katalin Ajtai, Anthony R. French, and Thomas P. Burghardt

543 Dynamics of the phosphate group in phospholipid bilayers: a ^{31}P angular dependent nuclear spin relaxation time study
Michael P. Milburn and Kenneth R. Jeffrey

551 Tb^{3+} and Ca^{2+} binding to phosphatidylcholine: a study comparing data from optical, NMR and infrared spectroscopies
Matthew Petersheim, Helen Nell Halladay, and Juris Blodnieks

559 Photoactive yellow protein from the purple phototrophic bacterium *Ectothiorhodospira halophila:* quantum yield of photobleaching and effects of temperature, alcohols, glycerol, and sucrose on kinetics of photobleaching and recovery
T. E. Meyer, G. Tollin, J. H. Hazzard, and M. A. Cusanovich

565 Ionic diffusion in voltage-clamped isolated cardiac myocytes: implications for Na, K-pump studies
David J. Mogul, Donald H. Singer, and Robert E. Ten Eick

579 Patch clamp recordings from membranes which contain gap junction channels
Peter R. Brink and Shih-fang Fan

595 Polarization states of diffracted light: changes accompanying fiber activation
J. S. Chen, R. J. Baskin, R. James Baskin, K. Burton, S. Shen, and Y. Yeh

607 Electric field-induced lateral mobility of photosystem I in the photosynthetic membrane: a study by electrophotoluminescence
Vlad Brumfeld, Israel R. Miller, and Rafi Korenstein

615 Lateral diffusion in an archipelago: the distance dependence of the diffusion coefficient
Michael J. Saxton

brief communications

623 Fast optical monitoring of microscopic excitation patterns in cardiac muscle
W. Müller, H. Windisch, and H. A. Tritthart

631 A modified reconstitution method used in patch-clamp studies of *Escherichia coli* ion channels
Anne H. Delcour, Boris Martinac, Julius Adler, and Ching Kung

october 1989
volume 56
number 4

641 Cell poration and cell fusion using an oscillating electric field
Donald C. Chang

653 Orientation of the protonated retinal Schiff base group in bacteriorhodopsin from absorption linear dichroism
Steven W. Lin and Richard A. Mathies

661 Theory of thermal anomalies in the specific heat of lipid bilayers containing cholesterol
John Hjort Ipsen, Ole G. Mouritsen, and Martin J. Zuckermann

669 Vesicle micelle transition of phosphatidylcholine and octyl glucoside elucidated by cryotransmission electron microscopy
Phillip K. Vinson, Yeshayahu Talmon, and Anne Walter

683 Interaction of water with oriented DNA in the A- and B-form conformations
Rolf Brandes, Allan Rupprecht, and David R. Kearns

693 Photocycles of bacteriorhodopsin in light- and dark-adapted purple membrane studied by time-resolved absorption spectroscopy
James Hofrichter, Eric R. Henry, and Richard H. Lozier

707 Poly(ethylene glycol)–induced shrinkage of Sephadex gel. A model system for quantitative analysis of osmoelastic coupling.
Tadanao Ito, Masahito Yamazaki, and Shun-ichi Ohnishi

713 Low-frequency collective modes in dry and hydrated proteins
M.-C. Belliessent-Funel, J. Teixeira, S. H. Chen, B. Dorner, H. D. Middendorf, and H. L. Crespi

717 Equilibrium distribution of ions in a muscle fiber
David W. Maughan and Robert E. Godt

723 A dimerization model for the concentration-dependent photophysical properties of diphenylhexatriene and its phospholipid derivatives. DPHpPC and DPHpPA.
Barry R. Lentz and Stephen W. Burgess

735 Selective detection of the rotational dynamics of the protein-associated lipid hydrocarbon chains in sarcoplasmic reticulum membranes
Thomas C. Squier and David D. Thomas

749 Activation of calcium channels in sarcoplasmic reticulum from frog muscle by nanomolar concentrations of ryanodine
Ricardo Bull, Juan José Marengo, Benjamin A. Suárez-Isla, Paulina Donoso, John L. Sutko, and Cecilia Hidalgo

757 Time-resolved x-ray diffraction and calorimetric studies at low scan rates. I. Fully hydrated dipalmitoylphosphatidylcholine (DPPC) and DPPC/water/ethanol phases
Boris G. Tenchov, Haruhiko Yao, and Ichiro Hatta

769 Nature of forces stabilizing the transmembrane protein bacteriorhodopsin in purple membrane
Nicholas J. Gibson and Joseph Y. Cassim

781 Rate of allosteric change in hemoglobin measured by modulated excitation using fluorescence detection
Anthony J. Martino and Frank A. Ferrone

795 Curare binding and the curare-induced subconductance state of the acetylcholine receptor channel
George Joseph Strecker and Meyer B. Jackson

november 1989
volume 56
number 5

809 Effect of joule temperature jump on tension and stiffness of skinned rabbit muscle fibers
Sergey Yu. Bershitsky and Andrew K. Tsaturyan

817 Adenosine diphosphate–induced aggregation of human platelets in flow through tubes. I. Measurement of concentration and size of single platelets and aggregates
David N. Bell, Samira Spain, and Harry L. Goldsmith

829 Adenosine diphosphate–induced aggregation of human platelets in flow through tubes. II. Effect of shear rate, donor sex, and ADP concentration
David N. Bell, Samira Spain, and Harry L. Goldsmith

845 Effect of cholesterol on structural and dynamic properties of tripalmitoyl glyceride. A high-pressure infrared spectroscopic study
P. T. T. Wong, T. E. Chagwedera, and H. H. Mantsch

851 Temperature jump study of charge translocation during the bacteriorhodopsin photocycle
Hans-Jürgen Butt, Klaus Fendler, András Dér, and Ernst Bamberg

861 Water in keratin. Piezoelectric, dielectric, and elastic experiments
Hideatsu Maeda

869 Translational diffusion and fluid domain connectivity in a two-component, two-phase phospholipid bilayer
Winchil L. C. Vaz, Eurico C. C. Melo, and Thomas E. Thompson

877 Slow motions in oriented phospholipid bilayers and effects of cholesterol or gramicidin. A ^{19}F-NMR $T_{1\rho}$ study
Zheng-yu Peng, Nico Tjandra, Virgil Simplaceanu, and Chien Ho

887 Polymorphism in the assembly of polyomavirus capsid protein VP_1
D. M. Salunke, D. L. D. Caspar, and R. L. Garcea

901 Temperature-induced changes in the coenzyme environment of D-amino acid oxidase revealed by the multiple decays of FAD fluorescence
Fumio Tanaka, Naoto Tamai, Iwao Yamazaki, Nobuaki Nakashima, and Keitaro Yoshihara

911 Calculations of scattered light from rigid polymers by Shifrin and Rayleigh-Debye approximations
Marilyn F. Bishop

927 Disorder induced in nonoverlap myosin cross-bridges by loss of adenosine triphosphate
Raul Padrón and Roger Craig

935 Complement proteins C5b-9 induce transbilayer migration of membrane phospholipids
B. Wieb Van Den Meer, Robert D. Fugate, and Peter J. Sims

947 Changes in the apparent quantum efficiency for photolysis of $Hb(CO)_1$
Ikbal A. Zahroon and Charles A. Sawicki

955 Competition between solution and cell surface receptors for ligand. Dissociation of hapten bound to surface antibody in the presence of solution antibody
Byron Goldstein, Richard G. Posner, David C. Torney, Jon Erickson, David Holowka, and Barbara Baird

967 Effects of passive tension on unloaded shortening speed of frog single muscle fibers
Dennis R. Claflin, David L. Morgan, and Fred J. Julian

979 Fluorescent cationic probes of mitochondria. Metrics and mechanism of interaction
James R. Bunting, Trung V. Phan, Eleanor Kamali, and Robert M. Dowben

995 Effect of cytoskeletal geometry on intracellular diffusion
J. J. Blum, G. Lawler, M. Reed, and I. Shin

1007 Inactivation properties of T-type calcium current in canine cardiac Purkinje cells
Yuji Hirano, Harry A. Fozzard, and Craig T. January

brief communications

1017 Antimicrobial peptide magainin I from *Xenopus* skin forms anion-permeable channels in planar lipid bilayers
Hervé Duclohier, Gérard Molle, and Gérard Spach

1023 External cadmium and internal calcium block of single calcium channels in smooth muscle cells from rabbit mesenteric artery
Y. Huang, J. M. Quayle, J. F. Worley, N. B. Standen, and M. T. Nelson

1029 Kinematics of the helical motion of microorganisms capable of motion with four degrees of freedom
Hugh C. Crenshaw

1037 Smoothed orientational order profile of lipid bilayers by ^{2}H-nuclear magnetic resonance
Michel Lafleur, Bernard Fine, Edward Sternin, Pieter R. Cullis, and Myer Bloom

letters to the editor

1043 Chain order profile in lipid H_{II} phases
M. B. Sankaram and Derek Marsh

1045 Hydrocarbon chain conformation in the H_{II} phase
Sol M. Gruner

1047 Reply to "Hydrocarbon chain conformation in the H_{II} phase"
James R. Scherer

1051 Correction

december 1989
volume 56
number 6

1053 Simultaneous imaging of cell and mitochondrial membrane potentials
Daniel L. Farkas, Mei-dong Wei, Peter Febbroriello, John H. Carson, and Leslie M. Loew

1071 Fluorescence measurement of chloride transport in monolayer cultured cells. Mechanisms of chloride transport in fibroblasts
A. C. Chao, James A. Dix, M. C. Sellers, and A. S. Verkman

1083 Orientational exchange approach to fluorescence anisotropy decay
David W. Piston and Enrico Gratton

1093 Thermodynamics of phosphatidylcholine-cholesterol mixed model membranes in the liquid crystalline state studied by the orientational order barameter
Y.-K. Shin and J. H. Freed

1101 Transition dipole orientations in the early photolysis intermediates of rhodopsin
J. W. Lewis, C. M. Einterz, S. J. Hug, and D. S. Kliger

1113 Diffraction rings obtained from a suspension of skeletal myofibrils by laser light illumination. Study of internal structure of sarcomeres
Shin'ichi Ishiwata and Nobuyuki Okamura

1121 Mathematical analysis of mural thrombogenesis. Concentration profiles of platelet-activation agents and effects of viscous shear flow
Bernard J. Folie and Larry V. McIntire

1143 Photoreactions of bacteriorhodopsin at acid pH
György Váró and Janos K. Lanyi

1153 Phase tracking: an improved phase detection technique for cell membrane capacitance measurements
Nancy Fidler and Julio M. Fernandez

1163 Tissue electroporation. Observation of reversible electrical breakdown in viable frog skin
Kevin T. Powell, Ann W. Morgenthaler, and James C. Weaver

1173 Infrared spectroscopic investigations of pulmonary surfactant. Surface film transitions at the air-water interface and bulk phase thermotropism
Richard A. Dluhy, Kim E. Reilly, Rodney D. Hunt, Melody L. Mitchell, Alan J. Mautone, and Richard Mendelsohn

1183 Conformation of spin-labeled melittin at membrane surfaces investigated by pulse saturation recovery and continuous wave power saturation electron paramagnetic resonance
Christian Altenbach, Wojciech Froncisz, James S. Hyde, and Wayne Hubbell

1193 Diffusional dynamics of an active rhodamine-labeled 1,4-dihydropyridine in sarcolemmal lipid multibilayers
R. Preston Mason and David W. Chester

1203 Excitation transport and trapping on spectrally disordered lattices
John M. Jean, Chi-Kin Chan, G. R. Fleming, and Thomas G. Owens

1217 Ionic currents of channels that are permeable to monovalent and divalent cations
Yoshio Oosawa

1225 Orientation of retinal in purple membrane determined by polarized Raman spectroscopy
Hisako Urabe, Jun Otomo, and Akira Ikegami

1229 Markov, fractal, diffusion, and related models of ion channel gating. A comparison with experimental data from two ion channels
M. S. P. Sansom, F. G. Ball, C. J. Kerry, R. McGee, R. L. Ramsey, and P. N. R. Usherwood

1245 Fluorescence lifetime distributions of diphenylhexatriene-labeled phosphatidylcholine as a tool for the study of phospholipid-cholesterol interactions
Edwin Kalb, Fritz Paltauf, and Albin Hermetter

brief communications

1255 Stimulus-response coupling in mammalian ciliated cells. Demonstration of two mechanisms of control for cytosolic [Ca^{2+}]
Manuel Villalón, Thomas R. Hinds, and Pedro Verdugo

1259 Factors affecting the absorption maxima of acidic forms of bacteriorhodopsin. A study with artificial pigments
A. Albeck, N. Friedman, M. Sheves, and M. Ottolenghi

1267 Guanosine-5′-*O*-(3-thiotriphosphate) modifies kinetics of voltage-dependent calcium current in chick sensory neurons
Carla Marchetti and Mauro Robello
